

DINAMİK PROJE

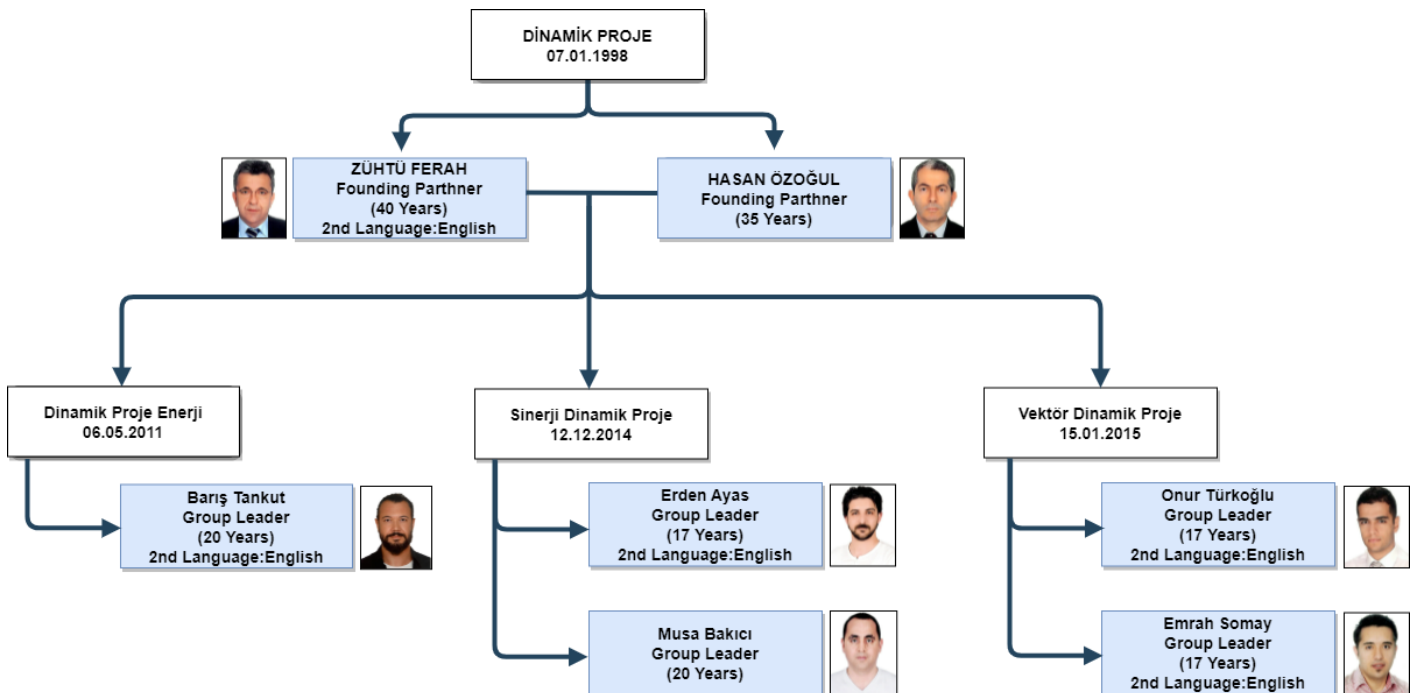

Dinamik Proje provides project and consultancy services for the facilities indicated in the design services section of our web site and on the subjects regarding Building Mechanical Installation. It has taken place in important projects, only some of which we have listed in the Projects section of our website, and it continues to do so both in Turkey and in the countries, we have indicated in the Company profile section of our website.

We have conducted works with reputable architecture and mechanical consulting groups regarding their productions, and these works are going on. Besides, we are one of the most important engineering groups that is very successful in and out of Turkey and which supports Turkish contracting companies. In parallel to our developments in our technological sub-investments, our support to contracting companies increasingly continues.

We have established sister companies whose names are Dinamik Proje Enerji, Sinerji Dinamik Proje and Vektör Dinamik Proje.

Dinamik Proje has been continuing without interruption for 32 years. We succeeded in retiring some of our friends in this association and we are so much proud of it. However, our association with them still continues and they maintain their efforts to transfer the experiences that they had obtained in years to our younger friends with a huge endeavor. More than half of our employees have an experience of working together between 10 and 25 years. This is both one of the sources of pride of our company and one of the vital reasons behind our achievements.
